Introducing Providence St. Joseph Health Digital Commons

Providence St. Joseph Health is excited to announce the launch of our Digital Commons: https://digitalcommons.psjhealth.org/. Digital Commons serves as an institutional repository to collect and present PSJH research and other scholarly activity in one convenient, easily navigable location. Digital Commons aims to activate the voice of PSJH and share our research accomplishments as a world-class research organization.

Articles are searchable and organized by Clinical Institutes and Departments and include links to available full-text. We have already populated Digital Commons with over 650 publications and we continue to add more every day. In addition to peer-reviewed publications, we plan to add conference abstracts, book/chapter citations, and other multimedia. Library Services runs weekly PubMed searches to capture journal articles but we need you to send us other items! Please send articles, presentations, abstracts, posters, etc. to digitalcommons@providence.org. Digital Commons is a wonderful way to disseminate non-indexed research and Digital Commons items are search engine optimized, to help you and your work appear at the top of Google searches.

Digital Commons also incorporates PlumX analytics to show altmetrics for citations, social media mentions, news mentions, and more. You can see PlumX in action here: https://digitalcommons.psjhealth.org/publications/42/

We are also developing the “Nursing – New Knowledge, Innovation, Improvement” collection to showcase work our Nursing departments have done in support of Magnet accreditation, nursing research, and other examples of nursing excellence. It is the first of many collections we plan to showcase the work of PSJH scholars. Digital Commons also has the ability to be used to house data sets, videos, as an e-journal publishing platform, and to create conference and event websites.

Digital Commons also includes the Expert Gallery, where we can showcase PSJH individual researchers’ selected works. You can see our first profiles here: https://works.bepress.com/experts/providence-st-joseph-health/

Please contact us if you would like to be a future profiled researcher.

We hope you will join us as creators and users of this cutting-edge new project at Providence St. Joseph Heath. For any questions, or to submit research, email digitalcommons@providence.org.
